Feeding Directions

Feed to lactating dairy cows along with good quality forages and clean, fresh water. Amount to feed depends on the quality and quantity of other feedstuffs available, production rate and body condition. Before making any feeding adjustments, contact an Animal Nutritionist.

CAUTION

Do not feed to sheep due to copper levels in this feed.

Always provide a source of fresh clean water, and free choice minerals. When making changes in an animal's diet, allow a 7 to 10-day transition period. Provide ample feeder space for livestock. Do not feed wet, moldy, or insect infested feed.

This feed is designed to be fed to lactating dairy cows with access to high quality forage. It will perform well when used with most lactating cow. It can also be used as a supplement for lactating beef animals to add protein and energy and to increase milk production and calf growth when the available nutrient in the forage are limiting. Access to quality forages is needed for a significant portion of each day. This product has also been used effectively with lactating dairy goats
